1. Code

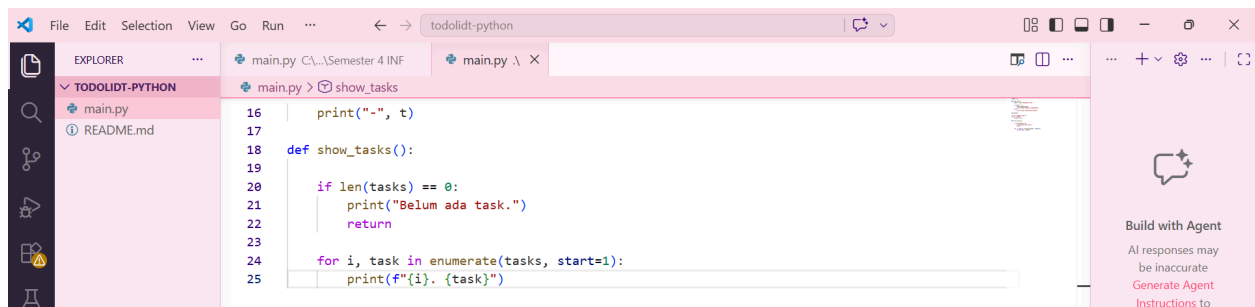

A. Add Task

The screenshot shows the Visual Studio Code editor with a file named `main.py` open. The code defines a list `tasks` and a function `add_task()` that prompts the user for a task and appends it to the list if it's not empty. The terminal shows the command `main.py > add_task()` being entered.

```
1 tasks = []
2
3 def add_task():
4     task = input("Masukkan task: ")
5
6     if task != "":
7         tasks.append(task)
8         print("Task berhasil ditambahkan")
9     else:
10        print("Task tidak boleh kosong")
11
12 add_task()
13
14 print("\nDaftar Task:")
15 for t in tasks:
16     print("-", t)
```

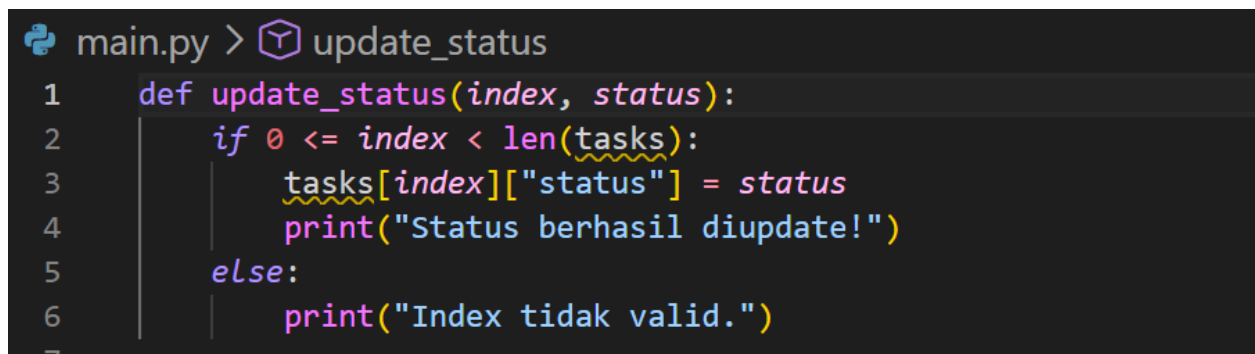

B. Show Task

The screenshot shows the Visual Studio Code editor with a file named `main.py` open. The code defines a function `show_tasks()` that prints the tasks list if it's not empty, or a message if it is. The terminal shows the command `main.py > show_tasks` being entered.

```
16 print("-", t)
17
18 def show_tasks():
19
20     if len(tasks) == 0:
21         print("Belum ada task.")
22         return
23
24     for i, task in enumerate(tasks, start=1):
25         print(f"{i}. {task}")
```

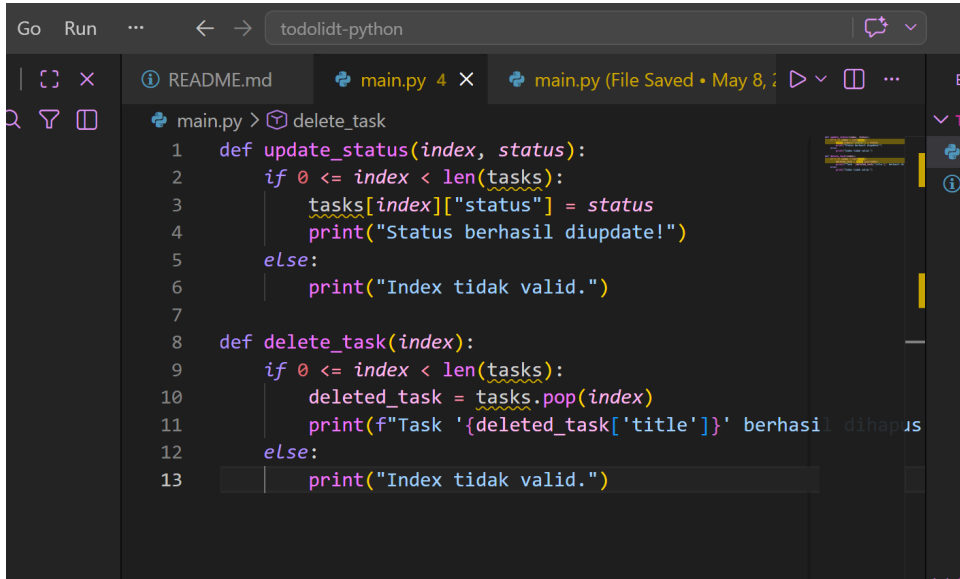

C. Update Task

The screenshot shows the Visual Studio Code editor with a file named `main.py` open. The code defines a function `update_status(index, status)` that updates the status of a task if the index is valid. The terminal shows the command `main.py > update_status` being entered.

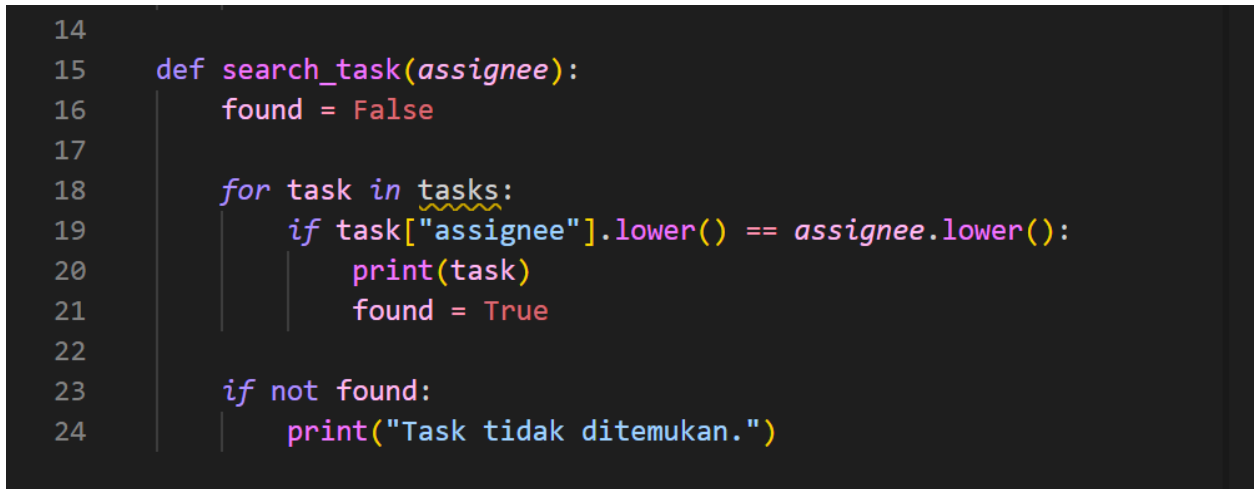

```
1 def update_status(index, status):
2     if 0 <= index < len(tasks):
3         tasks[index]["status"] = status
4         print("Status berhasil diupdate!")
5     else:
6         print("Index tidak valid.")
7
```

D. Delete Task

```
Go Run ... < -> todolidt-python
main.py > delete_task
1 def update_status(index, status):
2     if 0 <= index < len(tasks):
3         tasks[index]["status"] = status
4         print("Status berhasil diupdate!")
5     else:
6         print("Index tidak valid.")
7
8 def delete_task(index):
9     if 0 <= index < len(tasks):
10        deleted_task = tasks.pop(index)
11        print(f"Task '{deleted_task['title']}' berhasil dihapus")
12    else:
13        print("Index tidak valid.")
```

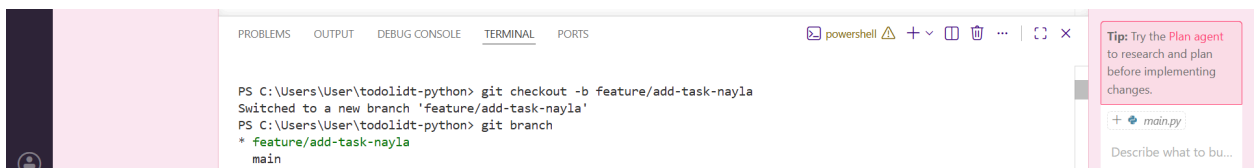

E. Search Task

```
14
15 def search_task(assignee):
16     found = False
17
18     for task in tasks:
19         if task["assignee"].lower() == assignee.lower():
20             print(task)
21             found = True
22
23     if not found:
24         print("Task tidak ditemukan.")
```

5. Pull Request

The screenshot shows a GitHub Pull Request (PR) for the repository `naylaputricahyaramadani-sudo/todolidt-python`. The PR is titled "Menambahkan fitur add task pada aplikasi To-Do List" and is currently in progress. The PR was created by the owner, `naylaputricahyaramadani-sudo`, 4 minutes ago. It includes two commits: "Menambahkan fitur add task" (commit hash 8a8e741) and "Memperbaiki tampilan daftar task" (commit hash a9f9e5c). The PR is ready for merging, as indicated by the green checkmark and the message "No conflicts with base branch. Merging can be performed automatically." The right sidebar shows the PR's metadata, including no reviews, no assignees, no labels, no projects, no milestones, and no development issues. The bottom of the screen shows a Windows taskbar with various application icons and the system clock.

6. Review Komentar

A. Add Task

The screenshot shows a code editor with a Python script named `main.py`. The script implements a To-Do list application with a function `add_task()` that prompts the user for a task and adds it to a list. The script also displays the list of tasks. A comment is visible on line 16, stating "Kode sudah cukup rapi dan mudah dipahami." (The code is already quite neat and easy to understand). The comment is from user `karensdr16` and is currently pending.

```
... @@ -0,0 +1,16 @@
1 + tasks = []
2 +
3 + def add_task():
4 +     task = input("Masukkan task: ")
5 +
6 +     if task != "":
7 +         tasks.append(task)
8 +         print("Task berhasil ditambahkan")
9 +     else:
10 +         print("Task tidak boleh kosong")
11 +
12 + add_task()
13 +
14 + print("\nDaftar Task:")
15 + for t in tasks:
16 +     print("-", t)
```

Comment on line R16

karensdr16 now Pending Collaborator

Kode sudah cukup rapi dan mudah dipahami.

Write a reply

B. Show Task

The image shows a code editor with a dark theme. The file is named `main.py`. The code is as follows:

```
11 +  
12 + add_task()  
13 +  
14 + print("\nDaftar Task:")  
15 + for t in tasks:  
16 +     print("-", t)  
17 +  
18 + def show_tasks():  
19 +  
20 +     if len(tasks) == 0:  
21 +         print("Belum ada task.")  
22 +         return  
23 +  
24 +     for i, task in enumerate(tasks, start=1):  
25 +         print(f"{i}. {task}")
```

On the right side of the editor, there is a notification box titled "Customizable line height" with the text: "The default line height has been changed to improve accessibility. You can choose to enable compact line height from the view settings." Below this text is a button labeled "Enable compact line height".

Below the code editor, a comment box is open for line R25. The comment is by user `karensdr16` and is marked as "now". The comment text is: "Function sudah berjalan dengan baik. Struktur penulisan kode juga sudah jelas dan konsisten." There is a "Pending" status indicator, a "Collaborator" label, and a three-dot menu icon. At the bottom of the comment box is a text input field with the placeholder "Write a reply".

Menambahkan fitur delete task

f4caa96

Fix fitur delete task

e4937fe

Fix indentasi delete task

d1ccb80

naylaputricahyaramadani-sudo commented now

Owner ...

Kode delete_task sudah oke karena task hanya akan dihapus jika index yang dimasukkan benar, jadi program tidak mudah error. Namun, ada penulisan def delete_task(index): yang terduplikasi, jadi salah satunya perlu dihapus supaya kodenya lebih rapi dan mudah dibaca.

Menambahkan fitur search task

Menambahkan fitur search task

31fa4b2

naylaputricahyaramadani-sudo commented now

Owner

Kode `search_task` sudah oke karena dapat mencari task berdasarkan nama assignee tanpa membedakan huruf besar dan kecil, sehingga pencarian menjadi lebih fleksibel. Selain itu, adanya pesan "Task tidak ditemukan" juga membantu pengguna mengetahui jika data yang dicari memang belum ada.

8. Refleksi

(Nayla)

Pengalaman saya menggunakan GitHub untuk kolaborasi sangat membantu dalam pengerjaan proyek kelompok karena setiap anggota dapat mengerjakan fitur masing-masing tanpa harus menggabungkan file secara manual. Kami menggunakan branching agar setiap orang bisa bekerja di branch yang berbeda sehingga tidak mengganggu branch utama, sedangkan pull request dan code review membantu memeriksa hasil coding sebelum digabungkan agar program lebih rapi dan mengurangi kesalahan. Kendala yang saya alami adalah masih bingung menggunakan beberapa command Git seperti push, pull, dan merge, serta terkadang terjadi konflik file ketika ada perubahan yang sama, namun hal tersebut dapat diatasi dengan saling berkomunikasi satu sama lain saya juga jadi mempelajari penggunaan GitHub secara bertahap.

(Karen)

Menurut saya, GitHub sangat mempermudah kerja sama dalam proyek kelompok karena semua anggota dapat mengerjakan bagian program secara bersamaan dan perubahan kode dapat tersimpan dengan aman. Branching bermanfaat agar setiap anggota fokus pada fitur masing-masing tanpa mengubah kode utama, sementara pull request dan code review membantu proses pengecekan kode sebelum digabungkan sehingga kualitas program menjadi lebih baik. Kendala yang saya alami adalah masih sering salah menggunakan command Git dan terkadang lupa branch yang sedang digunakan, tetapi masalah tersebut dapat diatasi dengan mengikuti tutorial, mencatat command penting, dan rutin melakukan sinkronisasi dengan repository terbaru.
